About Xspeed

XSPEED Propeller is a professional manufacturer of outboard propellers located in Qingdao, China. With more than 10 years of experience, we supply propellers for engines from 2 HP to 350 HP.

Our main products include:

- Aluminum outboard propellers
- Stainless steel outboard propellers
- Jet ski impellers
- Propeller mounting hardware kits and accessories

XSPEED propellers are compatible with major engine brands such as YAMAHA, MERCURY, HONDA, SUZUKI, TOHATSU and others.

Design & Engineering Team

Our engineers combine hydrodynamic theory, quantitative data analysis and extensive field testing to design world-class watercraft propellers.

R&D capabilities:

- CAD, CAM and CAE simulation
- Rapid prototyping and sample development
- Performance testing under real operating conditions
- Customized designs to meet specific
- Customer requirements

Quality Control & Testing

We operate a strict quality control system that covers the whole process from raw material incoming to final packaging.

Every propeller is inspected for:

- Material composition
- Hardness
- Dimensional accuracy (CMM)
- Dynamic balance
- Corrosion resistance (salt spray test)

XSPEED Propeller Basics

This information is critical to determining the correct propeller for your application:

1. Blades

3-blade: Higher top speed, good all-round performance.
 4-blade: Better grip, acceleration, and control with heavy loads.

2. Diameter

Width of the circle made by blade tips.
 Larger = more low-speed thrust; smaller = more RPM and potential top speed.
 Usually stay close to the original size.

3. Pitch

Theoretical forward travel per revolution (e.g., 19" pitch = 19" per turn).
 Higher pitch: More speed, slower acceleration.
 Lower pitch: Quicker acceleration, better for heavy boats or towing.

4. Rotation

Right-Hand (Standard): Used on most single engines.
 Left-Hand (Counter): Used on dual-engine setups to improve steering and stability.

5. Cupping

Small curved lip on the blade edge.
 Improves grip at speed and reduces cavitation under load.

6. Rake

Blade tilt relative to the hub.
 Higher positive rake helps lift the bow and can suit higher engine mounting and faster hulls.

7. Material

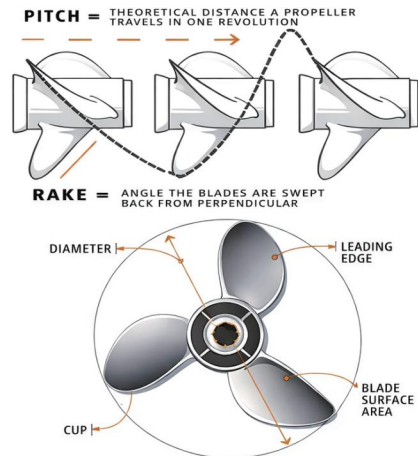

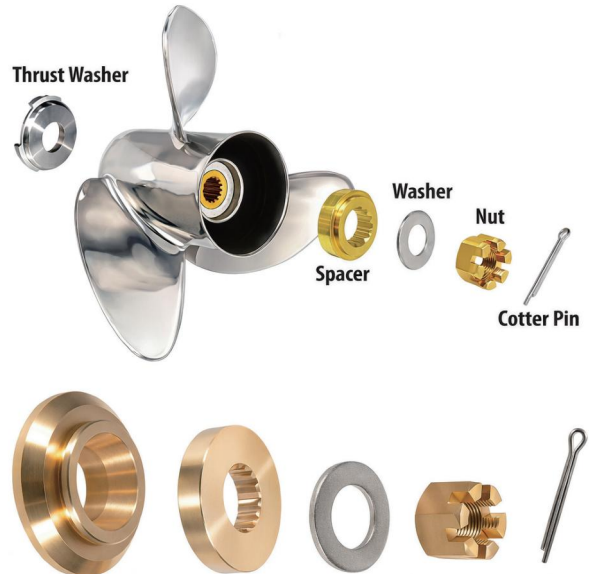

Aluminum: Cost-effective, lightweight, and forgiving for general use.
 Stainless Steel: Durable, high-performance, and resistant to damage in demanding conditions.

8. Key Selection Data

- Engine brand, model & horsepower
- OEM propeller size (diameter x pitch)
- Material: Aluminum or Stainless Steel

Quick Tip:

Check your existing propeller's markings (e.g., "14 x 19 RH") for a direct match.
